

SPHINX GLASS

WHEN PERFORMANCE MEETS DESIGN AESTHETICS

Glass is an artistic building material that can be used to great effect for commercial and residential use, in windows, roofs, glazed facades and more. Glass facades create an architectural character that exists inside and outside of the building. Grey glass, in particular, is mainly used to reduce glare by restricting or decreasing light transmission as well as for decorative glazing applications. It adds a sleek and neutral outdoor look, brightens indoor spaces and creates a striking statement of light and color. Grey glass also as a level of privacy and prevents fading of furnishings, fabrics, carpeting and artwork by cutting down UV radiation.

Sphinx glass is the market leader in grey glass in Egypt. The selection of Vistalite Grey and Solarlite Grey by Sphinx Glass, made according to international criteria, represents a new standard in architectural glass in Egypt, giving an impression of sophisticated beauty and providing high performance in thermal insulation and energy saving.

Sphinx Glass manufactures three types of grey glass: Euro-grey, Solarlite Grey and Vistalite Grey. Euro-Grey comes in an elegant light grey that enhances any building façade while simultaneously decreasing solar heat gain and glare, and reducing UV transmission. Solarlite Grey and Vistalite Grey, both are reflective grey glass that is made by applying a pyrolytic coating to the glass (creating a hard coating that is more durable), which further enhances the thermal insulation in buildings, leading to energy and money savings. Solarlite Grey and Vistalite Grey differ radically in color.

All of Sphinx Glass grey range is subtly (and aesthetically) transparent, strikingly reflective and versatile (easily processed). It lets the light in with solar energy control and can be bent or cut into almost any shape. So, when it comes to design and architecture, the possibilities are endless as well as remarkable.

Sphinx Glass is a partner in success after cooperating with rmc (raafat miller consulting) that has been providing architectural and engineering services to CFC (Cairo Festival City, Al-Futtain Group Real Estate development in New Cairo) for their Southern Business Park District, a landmark in the 5th Settlement. The design of the architectural buildings was in line with one of the trends of architectural designs. The glass used in glazing applications was supposed to be provided with certain standards. Therefore, Sphinx Glass was chosen for their superior grey glass selection. Three office buildings were built in 2014 and five more in 2017 and presently, there are eight buildings being constructed using Sphinx Glass grey selection.
